

# Port Solutions

---

Facilitation of port logistics operations

---

## About Us

We are a leading provider of solutions for trade facilitation, powered by world-class technology including artificial intelligence. We develop new-generation IT systems, coupled with efficient trade reforms, that take trade and customs processes to the next level for the benefit of the global trading community.

**Investing in employees, delivering value to customers, dealing ethically with suppliers and supporting outside communities.**

---

## We're International

---

## Port Solutions

Our **Port Solutions** provide an interface between port authorities, terminal operators and Customs, offering a comprehensive set of features designed for the facilitation of port logistics operations.

Automation and better transmission of information affords greater visibility of port operations, leading to smoother supply chain management, decongestion of ports and quicker clearance of goods.

Data integrity is ensured through the harmonization of formats across systems and no more manual data duplication.

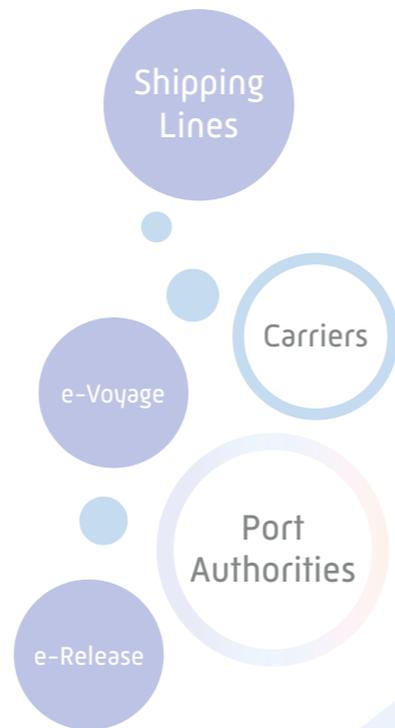

---

## How It Works

**Webb Ports** manages interactions between systems used by port authorities, Customs, and terminal operators, from data exchange and logistics through billing and payment.

The **e-Voyage** module enables shipping lines to interact with port authorities and exchange information. Carriers can load, edit and manage manifest data through the system. The data can be shared directly with port authorities and Customs in various electronic formats.

The **e-Release** module calculates all port associated fees using configurable taxation rules applied to the waybill and the Customs declaration. These rules also set the mandatory requirement of specific authorizations.

The **e-Movement** module provides complete monitoring of operations carried out on import and export goods. Movements, instruction and status changes are recorded, updated and visualised in a totally transparent way. Messages can be created and shared, for example when payment has been received or a release order has been issued.

The **e-Payment** module enables electronic payment of all charges related to port logistics, such as services, demurrage charges, handling costs, duties and taxes.

The **e-Booking** module allows traders to book containers and organise exports of goods.

---

## Port Solutions Products

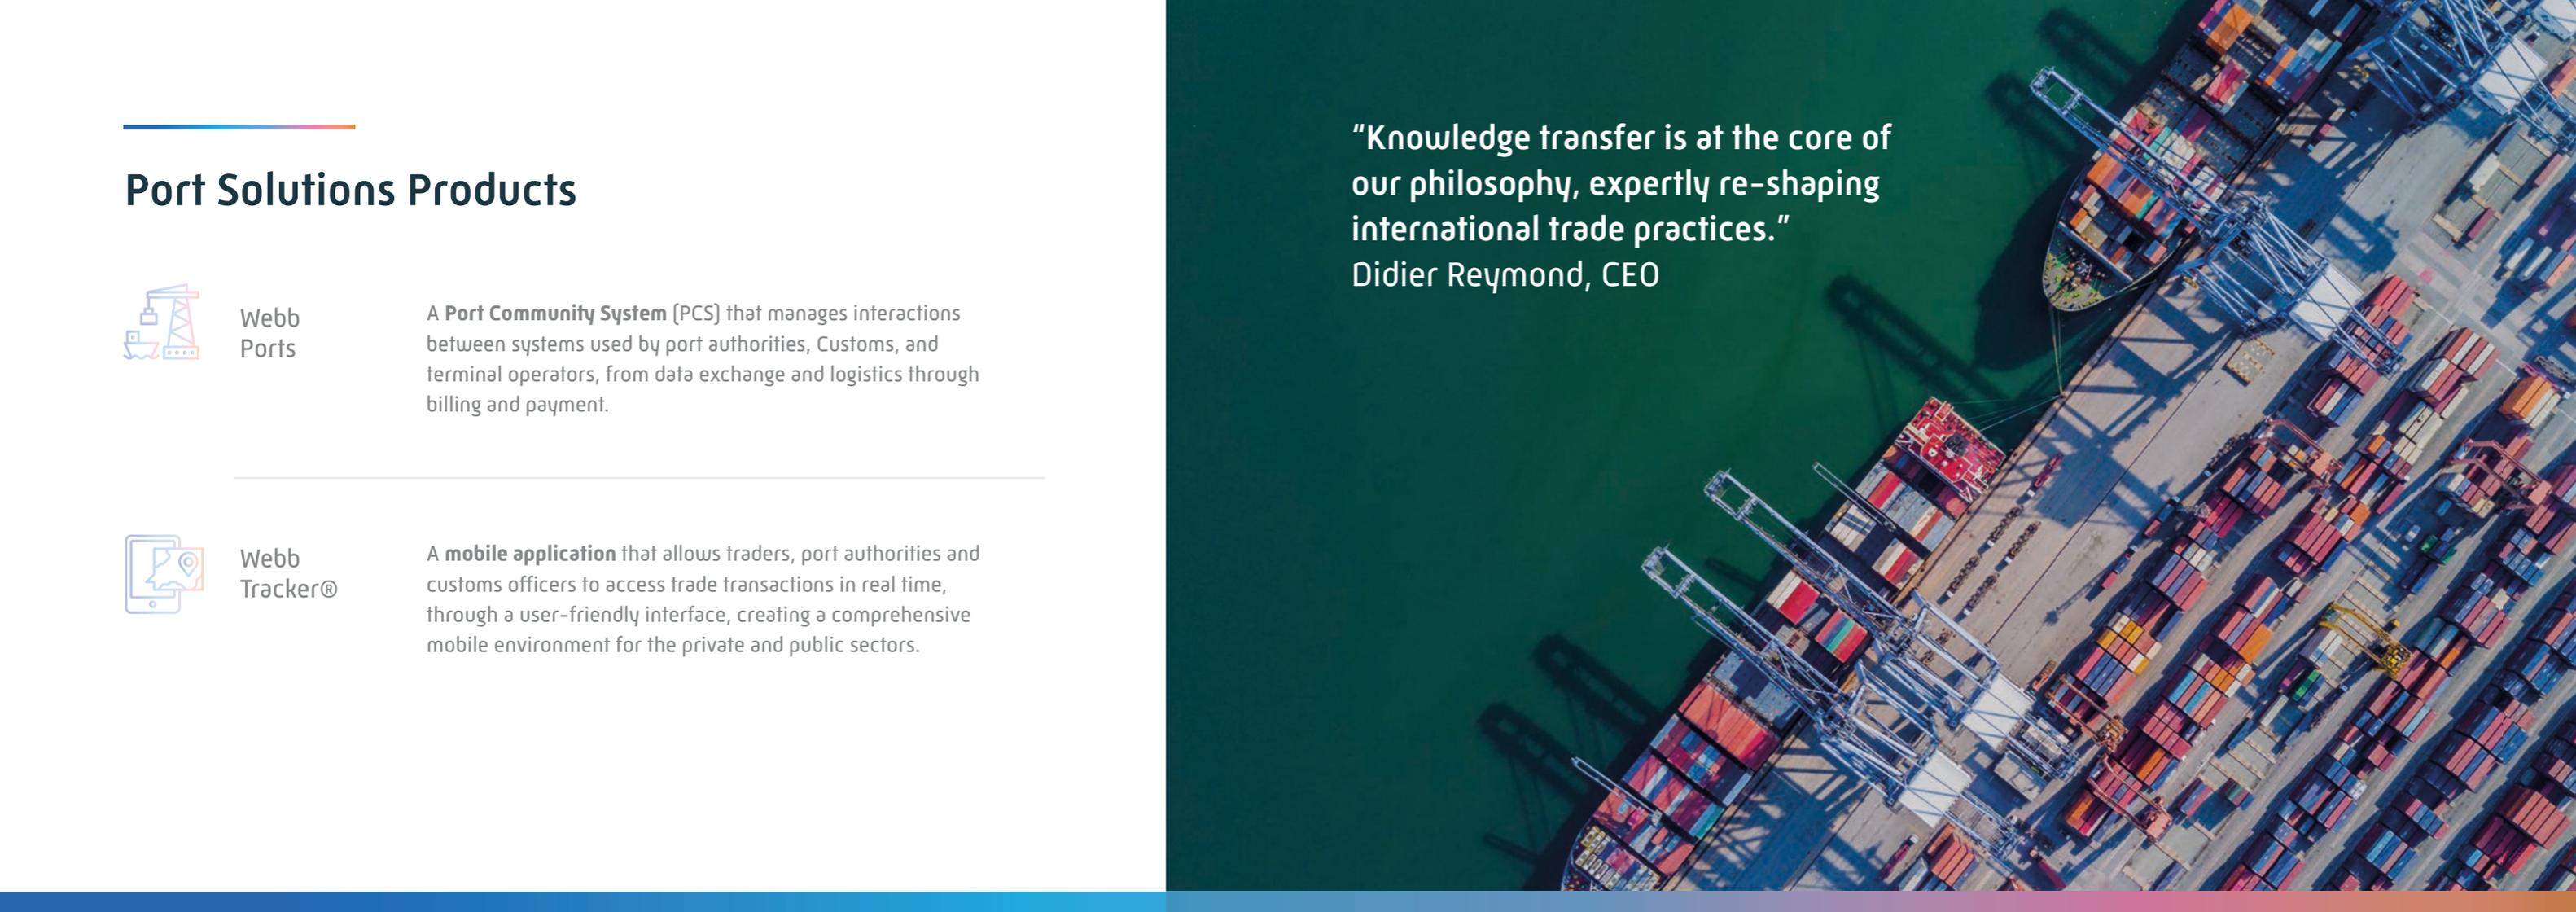

Webb  
Ports

A **Port Community System** (PCS) that manages interactions between systems used by port authorities, Customs, and terminal operators, from data exchange and logistics through billing and payment.

Webb  
Tracker®

A **mobile application** that allows traders, port authorities and customs officers to access trade transactions in real time, through a user-friendly interface, creating a comprehensive mobile environment for the private and public sectors.

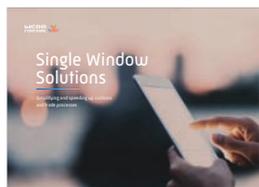

“Knowledge transfer is at the core of our philosophy, expertly re-shaping international trade practices.”

Didier Reymond, CEO

## Other Solutions

Our unique suite of **Customs Solutions** automate the entire customs process from pre-clearance to post-clearance. Processing all Customs documents and procedures digitally through a single interface.

Our exclusive **Single Window solutions** interconnect all stakeholders involved in foreign trade and allows them to perform trade procedures on a single platform. Simplifying and speeding up customs and trade processes for both traders and government agents.

Webb Fontaine provides the necessary **Infrastructure** to support the automation of Customs and trade procedures, including information and communication technology (ICT), data centres, power supply and office renovation.

## Success Stories

Discover all of our success stories on our website, or scan the QR code for a quick flight around the globe.

### Panama

Technological Platform for the integration of the Logistics and foreign Trade systems.

### Côte d'Ivoire

Implementation of the National Single Window for International Trade.

### Guinea

Implementation of a Single Window platform and a Port Community System.
